

Diagram of Analytic Plan of Deliverable 2

This diagram characterizes the methods and primary procedures involved in the accomplishment of the analytic plan. The plan will be submitted to OAC, discussed, revised, and approved. Subsequently, the plan will be submitted for review to the UC Davis Institutional Review Board (IRB). Following IRB approval, we will begin contacting referral sources and Key Informants for interview; additional Key Informant interviews will be conducted based on the list of contacts generated in discussion with referral sources. Analysis of Key Informant interviews will result in the following: (1) a list of Key Informant contacts beyond those typically selected to provide information for State-related evaluations, who may provide additional insights; (2) a list of un(der)- and inappropriately-served groups and contacts for potential focus group participation; and (3) findings related to topic areas elicited by responses to guiding interview questions. Data analysis for Key Informant interviews will provide context for understanding the experiences of focus group participants as well as directions for further exploring their experiences and recommendations. Potential focus group participants will be organized according to their expertise and experience with California mental health services and then purposefully sampled and invited for participation in an interview. Analysis of focus group interviews will result in the following: (1) examples of stakeholder experiences of clientele and family from un(der)- and inappropriately-served communities; (2) a list of barriers to receiving adequate or appropriate care; and (3) findings related to topic areas elicited by guiding interview questions. Collective findings from Key Informant and focus group interviews will be used to help interpret quantitative results and to provide context and examples of "lived experiences" of clients and families with California mental health services, to outline barriers to and facilitators of services, and to assess the impact of MHSA on disparities.
